

Food Service Cashless Solutions

ITC Systems' cashless food service and Point of Sale (POS) solution is geared at increasing revenue and enhancing the dining experience for both the staff and the customer.

Functionality

Replacing cash across your food service operation by implementing our Closed Loop Commerce Solution is a cost effective way to increase efficiencies and revenue. Our configurable solutions offer ideal ways to introduce "cashless" food service programs into your organization. With ITC Systems' Closed Loop Commerce Solution integrated into your operation you will be able to increase sales, reduce operational costs, and improve cash flow while offering your customers greater convenience and security.

Our selection of POS Software will raise your operational efficiency by providing tools to service customers while at the same time sending accurate information to the food prep staff. You will have the power to change a menu item, add a promotion and customize pricing. The solution offers operational capability, a comprehensive feature set, powerful reporting abilities, data redundancy, and data synchronization management. The choice is yours for various peripherals including scales, kitchen printers, receipt printers, cash drawers, coin changers, barcode scanners, mag-swipe readers, contactless readers, surveillance systems, digital signage, a mobile application with full integration to netZcore.

Benefits

- Increase your food sales revenue
- Enhance user and staff experience
- Fast transactions, shorter lineups
- One-card does all, security, ID, meal plans, and food service
- Central Database Management for cashless transactions
- Improve accountability, financial tracking, and reconciliation
- Payroll deduction capability
- Scalable - single or large multi site network of POS locations

Applications

- University and College Campuses
- Cafeterias
- Correctional food service & vending
- Retirement community food service
- Institutional Food Service Environments

Online Cashless Solution 'BANK THE FUNDS'

ITC Systems' premier online food service solutions begins with netZcore, our real time, online debit, credit, meal plan, and transaction management software. This powerful back-end software resides on a server that communicates over TCP/IP with your cash registers, vending terminals or POS terminals. To process transactions, terminals are equipped with card readers that read patrons' cards, access account information, and approve transactions.

With netZcore you can stipulate a specific number of meals per day or per plan. Alternatively, you can set dollar values per meal, per day, or per plan. Limit or set time frames when patrons are allowed to eat as well. A much needed feature for most educational dining and corporate dining programs.

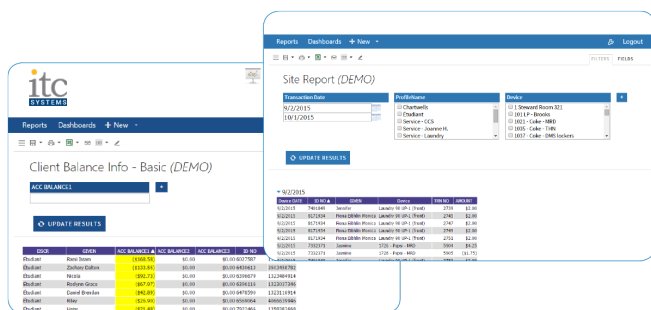

POS terminals and Cash Registers are cashier operated devices that conduct traditional food service transactions and communicate back to the netZcore, Closed Loop Commerce Solution database. The Loader offers your clients the flexibility and convenience of a 24-hour cashier to add value to accounts. The MDB Vending terminals provide a TCP/IP connection back to a netZcore account.

ITC Systems POS Software Features Point of Sale

- Dynamic Interface to netZcore Software
- Table management & check splitting
- Unlimited price level configurations
- Unlimited SKU
- Multiple currencies and languages

Connect with...

netZcore Software

This powerful back-end software will help you meet your needs with flexible and configurable accounts and meal plan solutions. netZcore is the transaction engine for account-based management in an institutional cost recovery solution. This powerful back-end software integrates site-wide terminals using a variety of application-specific modules to centralize and report all transaction data.

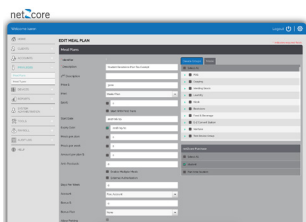

netZcore Purchase

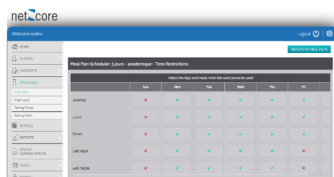

Web-based account management, fully integrated with the Closed Loop Commerce Solution software netZcore. This allows any authorized users the option of adding value to their account remotely over the web on a PC or mobile device. Users can quickly and easily review their account balances, purchase meal plans, and events or privilege plans using this safe and secure platform.

netZcore Reporting

netZcore Reports is the basic reporting package available that provides all of the standard reports required to report on and operate the netZcore commerce solution at your institution.

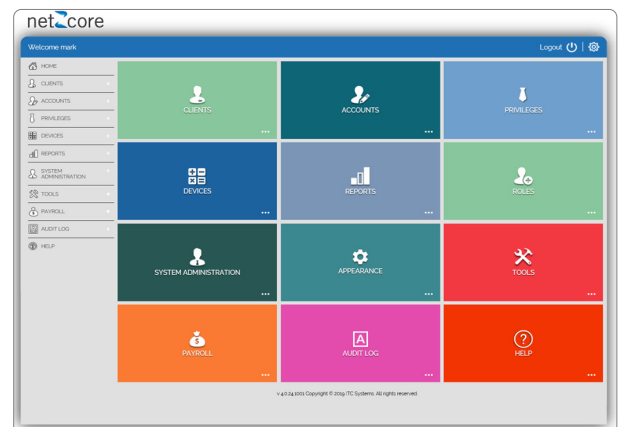

Assign each participant an account number linked to their ID card or other machine readable media.

Stipulate a specific number of meals per day or per plan, set dollar values per meal, per day or per plan, set time frames when patrons are allowed to eat and much more.

netZcore Administration

An easy-to-use web-based application that is fully integrated with ITC Systems' netZcore software. System administrators have full access to the application, and are in control of providing operators authorization rights based on their designated role on site. This would include merchants and vendors who are set up to view

Key Solution Components

ITC Systems' industry leading food service management equipment and components are built to exacting standards for security and ease of use. Durable construction and intuitive design ensures that your system is easy to use and maintain.

POS Terminals and Vending

POS Terminals

ITC Systems integrates with industry leading PC based POS and ECR manufacturers.

Aures, Model J2 225

J2 line of products, a solid state, all-in-one POS Terminal. Made of tempered glass. Reliable and very durable, perfect for high-use environments.

netZtouch, Model 7800-POS

Great for those smaller venues that do not require a full fledged POS or Cash Register. Comes with basic POS functionality; 26 PLUs, 4 media keys (Account, Meal Plan, Cash, Other), VOID and Refund capabilities,

Touch Dynamics, Model Quest III

The Quest III tablet is tested and proven to work with each card brand, providing another layer of protection and ensuring you can securely accept all of your customers' preferred payment methods.

NetLink Vending Terminal, Model 7020

Provides quick and easy access to vending machines online via TCP/IP back to an account on the network. Fits in bill validator opening and communicates with machine via the MDB protocol.

Account and Card Loader, Models 7880

The key component in a cash card or account-based revenue system. Accessible 24/7, loaders can dispense and revalue either magnetic stripe card or online accounts.
