Enterprise Level Software Solution

What really sets our offering apart is the software. Our software is designed with food service and campus commerce solutions in mind. The features are definitely developed for the quick service industry and also fine dining and bar service which gives us a competitive advantage over other vendors that compete in our space.

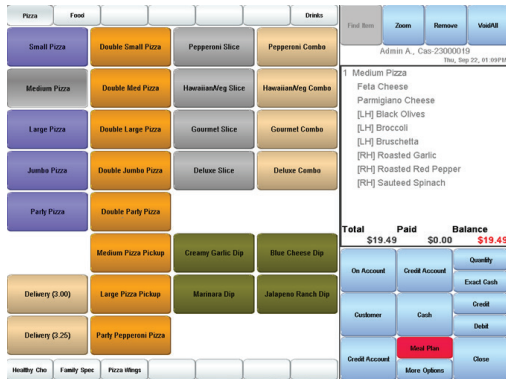

Volanté Food Service Solution

Our POS Software will raise your operational efficiency by providing tools to service customers while at the same time sending accurate information to the food prep staff. You will have the power to change a menu item, add a promotion and customize pricing. The solution offers operational capability, a comprehensive feature set, powerful reporting abilities, data redundancy, and data synchronization management.

- ✓ Ideal for cafeteria, convenience store, fine dining, bars, table service
- ✓ Full Integration of Volanté POS software with net2core
- ✓ Handles student meal plans
- ✓ Display students picture on POS screen for verification
- ✓ Contactless, Swipe Reader, Biometric authentication
- ✓ Enterprise Back End available
- ✓ Detailed financial and operation reporting
- ✓ Promotions, bounce-backs and up-sell couponing

- ✓ Offline transactions stored for upload later
- ✓ Processes transactions automatically
- ✓ Plan/Account Automated tax removal
- ✓ Aggregated balance/plan transaction processing
- ✓ Provide discounts based on Account configuration
- ✓ Permit specific accounts and plan access at venues
- ✓ Can add value to accounts with R/A function

Volanté has pioneered data handling techniques and architecture that will ensure day to day operations will never lose data. Every POS terminal contains a fully ODBC compliant database complete with setup information. Transactional data is stored on terminals and synchronized to server

If disaster strikes, Volanté's technology enables short, simple, and effortless steps to full data recovery.

Library Specific POS

Integrated with the Library Management System (LMS) provides a streamlined approach to improve customer service, reduce staff time and provide detailed financial accounting to the administration. Complete integration to the ITC Systems' net2core commerce and our GoPrint software. This library POS solution provides complete control and flexibility on how items are managed and sold.

Customizable screen layout and pricing levels allow the library to program the POS in any configuration you choose; a single item, multiple items or any other pricing structure you define.

Fine Payments

Our SIP2 integration for fine payments enable this POS solution to pull detailed outstanding fines from the LMS and allow them to be paid individually, partially, or all at once. Enable circulation desk staff to forgive or waive patron fines and enter a reason. Takes all forms of payment from library patron card, cash, to debit and credit.

- ✓ Intuitive User Interface and Experience
- ✓ Magnetic Swipe, Contactless or Barcode
- ✓ Remote Configuration of Parameters and Settings
- ✓ Barcoded items
- ✓ Cash Drawer and Receipt Printer Options

Mini POS 7835

Great for those smaller venues that do not require a full fledged POS or Cash Register. Comes with basic POS functionality; 26 PLUs, 4 media keys (Account, Meal Plan, Cash, Other), VOID and Refund capabilities, One Touch transaction processing (breakfast, lunch, dinner, etc.), Receipt Printer port with Cash Drawer output. Reporting uses the standard 'X' or 'Z' reports. All transactions processed and stored in net2core .

On top of the 26 PLU's the 7835 Mini POS accepts up to 250 barcoded products in its memory. Scan the code and add a description with a price then you're ready to conduct transactions using that barcode.
